ANY ZARISKI COVERING IS AN ETALE COVERING

THE STACKS PROJECT AUTHORS

Editorial note. All delivered mathematical text is the author's own, copied verbatim from the pinned Stacks Project chapter file topologies.tex; no statement or proof step was rewritten, reordered or removed.

Editorial note. Span recomputation by label pairing (LANE_BRIEF 10.2): the official pool candidate recorded statement [948, 951] and proof(s) [[953, 957]]; this spec covers the complete environment instead (statement 948-951, proof span(s) [(953, 957)]), since in this chapter the author's proof environment(s) follow the statement environment and some pool entries under-counted them.

Editorial note. Definitional unpacking with one cited morphism fact.

Source reference. Original reference 02GP: sources/stacks-chow/tags.txt, source lines 3236–3236. Cross-chapter standard prerequisite cited by the author inside the counted span; it is used as a pointer and its own proof is not part of this item.

Lemma 0.1. *Any Zariski covering is an étale covering.*

Proof. This is clear from the definitions and the fact that an open immersion is an étale morphism, see Morphisms, Lemma 02GP. □
