$j \coloneqq 1$
κ is the current partial assignment
while $j \leq k$ **do**
    u is the root of T_{i_j}
    while u is not a leaf **do**
        x is a label of u
        if $x \in \mathrm{supp}(\kappa) \cup \mathrm{supp}(\rho)$ **then**
            Let v be a child of that correspond to $(\kappa \cup \rho)(x)$
            $u \coloneqq v$
        else
            Pick η on $\mathrm{Ext}^{\zeta_2}_{G}(J_\kappa \cup \{x\}) \setminus \mathrm{Ext}^{\zeta_2}_{G_\ell}(J_\kappa)$ in a way that:
                - it satisfies $A^{\mathrm{ICl}^{\zeta_2}_{G_\ell}(J_\kappa \cup \{x\}) \setminus \mathrm{ICl}^{\zeta_2}_{G_\ell}(J_\kappa)}$;
                - it is consistent with ρ
            $\kappa \coloneqq \kappa \cup \eta$
            $J_\kappa \coloneqq J_\kappa \cup \{x\}$
    if $u \in \mathrm{Br}^{*}_{T_{i_j}} \cup \mathrm{Br}^{0}_{T_{i_j}}$ **then return** i_j, u, κ
