GLUEING FINITE PRESENTATION SPACES NEAR A CLOSED POINT

THE STACKS PROJECT AUTHORS

Editorial note. Counted span is the author's own proof environment, source lines 4210-4237, following the statement at 4197-4208.

Editorial note. No omissions; the final combination step is stated as formal from the displayed identifications.

Allowed standard prerequisites (editorial).

- Zariski glueing of finite presentation spaces. lemma-relative-glueing (same chapter, card L26319, cited at ~4215). FP_S = FP_U x_{FP_{W-setminus{s}}} FP_W for open W containing s.
- Local ring as colimit over affine neighbourhoods. lemma-descend-finite-presentation (same chapter, card L26286, cited at ~4224-4225). FP over Spec(O_{S,s}) = lim of FP over the affine neighbourhoods W.
- Limits of schemes with affine transitions. Limits, Lemma limits-lemma-directed-inverse-system-has-limit (cross-chapter, cited at ~4228-4230). V = lim (W cap U) is a limit of qcqs schemes.

Lemma 0.1. *Let S be a scheme. Let $s \in S$ be a closed point such that $U = S \setminus \{s\} \to S$ is quasi-compact. With $V = \mathrm{Spec}(\mathcal{O}_{S,s}) \setminus \{s\}$ there is an equivalence of categories*

$$FP_S \longrightarrow FP_U \times_{FP_V} FP_{\mathrm{Spec}(\mathcal{O}_{S,s})}$$

where FP_T is the category of algebraic spaces of finite presentation over T.

Date: stacks-project:spaces-limits.tex:local-snapshot-20261012; GNU FDL 1.2 or later.

Proof. Let $W \subset S$ be an open neighbourhood of s. The functor

$$FP_S \to FP_U \times_{FP_{W \setminus \{s\}}} FP_W$$

is an equivalence of categories by Lemma 0E8Z. We have $\mathcal{O}_{S,s} = \operatorname{colim} \mathcal{O}_W(W)$ where W runs over the affine open neighbourhoods of s. Hence $\operatorname{Spec}(\mathcal{O}_{S,s}) = \lim W$ where W runs over the affine open neighbourhoods of s. Thus the category of algebraic spaces of finite presentation over $\operatorname{Spec}(\mathcal{O}_{S,s})$ is the limit of the category of algebraic spaces of finite presentation over W where W runs over the affine open neighbourhoods of s, see Lemma 07SK. For every affine open $s \in W$ we see that $U \cap W$ is quasi-compact as $U \to S$ is quasi-compact. Hence $V = \lim W \cap U = \lim W \setminus \{s\}$ is a limit of quasi-compact and quasi-separated schemes (see Limits, Lemma 07SF). Thus also the category of algebraic spaces of finite presentation over V is the limit of the categories of algebraic spaces of finite presentation over $W \cap U$ where W runs over the affine open neighbourhoods of s. The lemma follows formally from a combination of these results. $\square$
