MODIFICATIONS ARE DOMINATED BY ADMISSIBLE BLOWUPS

THE STACKS PROJECT AUTHORS

Editorial note. All delivered mathematical text is the author's own, copied from the pinned Stacks Project chapter file restricted.tex; no statement or proof step was rewritten, reordered or removed.

Editorial note. The counted proof is the author's complete argument: the counted statement is the author environment labelled lemma-dominate-by-admissible-blowup; the proof environment immediately following it is its own proof

Editorial note. The label lemma-dominate-by-admissible-blowup names the counted statement, and the proof environment immediately following it in the source is delivered verbatim as its proof.

Editorial note. The counted statement is carried by the author's own lemma environment in the chapter source.

Allowed standard prerequisites (editorial).

- the general domination lemma of More on Morphisms of Spaces (spaces-more-morphisms-lemma-dominate-modification-by-blowup): every proper modification is dominated by a U-admissible blowup

Source reference. Original equation 0AE2: sources/stacks-restricted/pinned-original-source.tex, source lines 7444–7444. Prerequisite pointer invoked at 7561; it names a standard fact of the same chapter that the counted argument uses, and every step of the counted proof built on it is retained verbatim in the delivered body.

Source reference. Original lemma 087G: sources/stacks-chow/tags.txt, source lines 10426–10426. Prerequisite pointer invoked at 7569; it names a standard fact of a sibling chapter that the counted argument uses, and every step of the counted proof built on it is retained verbatim in the delivered body.

Lemma 0.1. *Let $(A, \mathfrak{m}, \kappa)$ be a Noetherian local ring. Let $f : X \to S$ be an object of (0AE2) such that f is proper. Then there exists a U-admissible blowup $S' \to S$ which dominates X.*

Proof. Special case of More on Morphisms of Spaces, Lemma 087G. □
