RIG-ETALE MORPHISMS ARE LOCALLY OF FINITE TYPE

THE STACKS PROJECT AUTHORS

Editorial note. All delivered mathematical text is the author's own, copied from the pinned Stacks Project chapter file restricted.tex; no statement or proof step was rewritten, reordered or removed.

Editorial note. The counted proof is the author's complete argument: the counted statement is the author lemma environment labelled lemma-rig-etale-finite-type; the proof environment immediately following it is its own proof

Editorial note. The label lemma-rig-etale-finite-type names the counted statement, and the proof environment immediately following it in the source is delivered verbatim as its proof.

Editorial note. The counted statement is carried by the author's own lemma environment in the chapter source.

Allowed standard prerequisites (editorial).

- the property P of arrows defining rig-etale-ness in WAdm^Noeth (lemma-rig-etale-axioms of the same chapter)
- the Formal Spaces lemmas: the restricted power series conditions (formal-spaces-lemma-quotient-restricted-power-series) and the local property criterion for finite type (formal-spaces-lemma-finite-type-local-property)

Source reference. Original lemma 0ANW: sources/stacks-chow/tags.txt, source lines 13454–13454. Prerequisite pointer invoked at proof line(s) 5110; it names a standard fact of a sibling chapter that the counted argument uses, and every step of the counted proof built on it is retained verbatim in the delivered body.

Source reference. Original lemma 0ANU: sources/stacks-chow/tags.txt, source lines 13452–13452. Prerequisite pointer invoked at proof line(s) 5108; it names a standard fact of a sibling chapter that the counted argument uses, and every step of the counted proof built on it is retained verbatim in the delivered body.

Source reference. Original reference 0AQL: sources/stacks-restricted/pinned-original-source.tex, source lines 4788–4788. Prerequisite pointer invoked at proof line(s) 5105; it names a standard fact of the same chapter that the counted argument uses, and every step of the counted proof built on it is retained verbatim in the delivered body.

Lemma 0.1. *A rig-étale morphism of locally Noetherian formal algebraic spaces is locally of finite type.*

Proof. The property P in Lemma 0AQL implies the equivalent conditions (a), (b), (c), and (d) in Formal Spaces, Lemma 0ANU. Hence this follows from Formal Spaces, Lemma 0ANW. □
