

$$\begin{aligned}
 & \text{Diagram 1} + \text{Diagram 2} + \text{Diagram 3} + \text{Diagram 4} = 0
 \end{aligned}$$

The image shows four diagrams, each consisting of a circle with four points on its circumference labeled 1, 2, 3, and 4. The points are positioned at the top, right, bottom, and left of the circle, respectively. In each diagram, a purple-shaded region is formed by connecting three of these points with curved lines. The diagrams are summed together, and the result is zero.

- Diagram 1:** The shaded region is a triangle with vertices at points 1, 2, and 3.
- Diagram 2:** The shaded region is a triangle with vertices at points 1, 3, and 4.
- Diagram 3:** The shaded region is a triangle with vertices at points 1, 2, and 4.
- Diagram 4:** The shaded region is a triangle with vertices at points 2, 3, and 4.
