RELATIVE PERFECTIVITY PULLS BACK ALONG ARBITRARY BASE CHANGE OF THE TARGET

THE STACKS PROJECT AUTHORS

Editorial note. Statement span is lines 12401-12410 of sources/stacks-spaces-more-morphisms/pinned-original-source.tex; proof span is lines 12412-12418, the complete author proof (5 body lines).

Editorial note. Navigation stubs: 2 cited-but-not-included labels are supplied as non-load-bearing pointers with their pinned tags where the snapshot tag index has them.

Editorial note. extra_packages is empty on purpose: the retained preamble already loads xy with options and a second declaration clashes in the assembler wrapper.

Editorial note. Text is retained verbatim, including the author's own typos and placeholders.

Editorial note. Definitional-reduction template (two-move, both named); pairs with L16176 same wave as the two closure laws of the relative-perfect cone.

Allowed standard prerequisites (editorial).

- Explicit prerequisite boundary. Chapter lemma affine-locally-rel-perfect; Derived Categories of Schemes, lemma base-change-relatively-perfect.

Source reference. Original lemma 0DKQ: sources/stacks-spaces-more-morphisms/pinned-original-source.tex, source lines 12313–12335. Cited by the retained statement or proof but not part of the collected spans; supplied only as a navigation pointer. The argument does not depend on its content.

Source reference. Original lemma 0DI5: sources/stacks-spaces-more-morphisms/pinned-original-source.tex, source lines 12418–12418. Cited by the retained statement or proof but not part of the collected spans; supplied only as a navigation pointer. The argument does not depend on its content.

Lemma 0.1. *Let S be a scheme. Let $f : X \to Y$ be a morphism of algebraic spaces over S which is flat and locally of finite presentation. Let $g : Y' \to Y$ be a morphism of algebraic spaces over S. Set $X' = Y' \times_Y X$ and denote $g' : X' \to X$ the projection. If $K \in D(\mathcal{O}_X)$ is Y-perfect, then $L(g')^*K$ is Y'-perfect.*

Proof. Reduce to the case of schemes using Lemma 0DKQ and then apply Derived Categories of Schemes, Lemma 0DI5. □
